

ABSTRACT

To provide a container inspection/cargo-handling system capable of efficiently inspecting import/export containers.

5 In order to solve the aforesaid problem, a container inspection/cargo-handling system of the present invention includes an automated guided vehicle (AGV) 18 that travels in circulation in a quay area. Further, on a circulation travel line of the AGV 18, provided are a quay crane 16 loading/unloading a container 14 to/from the AGV 18, a radiation inspection
10 device 20 inspecting a cargo in the container 14 loaded on the AGV 18, and a container transfer means 22 for transferring the container 14 between the AGV 18 and a manned transport vehicle (container transport vehicle) 24.
